KEY BENEFITS
• Use 5–10% less ink
• Better for the environment
• Improved end-of-life indication

IDEAL FOR
• Solvent-based inks
• Whiteboard markers
• Permanent markers
THE FUTURE OF PREMIUM INK MANAGEMENT

POREX® high-efficiency reservoirs are designed to actively manage ink delivery, as opposed to the passive nature of traditional reservoirs.

The patent-pending gradient density creates a strong capillary draw within each reservoir. Ink is physically pulled from the outer circumference into the reservoir’s inner core. This channels the ink directly onto the nib, providing a more distinct end of product life.

Manufacturers of premium writing instruments can use a smaller volume of ink while delivering a superior product to market. Consumers will appreciate knowing exactly when their marker needs to be replaced.

Unlike traditional reservoirs, the capillary draw of our patent-pending design channels ink straight to the nib.

Uses 5–10% Less Ink
